

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: January 2015

Highlights

- Actual housing starts declined in December
- Price growth continues in the new home and resale market
- Decline in migration to Alberta continues

Figure 1

* SAAR: Seasonally Adjusted Annual Rate

Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 14,708 units in December compared to 15,182 in November. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts for the Edmonton CMA totalled 1,086 units in December, 11 per cent lower than the same month of 2013. The decline was attributable to lower multi-family housing starts, as single-detached starts increased on a year-over-year basis. On an annual basis, housing starts decreased six per cent from 14,689 in 2013 to 13,872 in 2014.

Single-detached housing starts in the Edmonton CMA reached 528 units in December, up 36 per cent over the same period of 2013. Within the City of Edmonton, single-detached starts were stable at 380, compared to 377 in December 2013. Annually, single-detached housing starts increased 14 per cent in 2014 to 6,832 units, its highest level since 2007. Employment and wage growth, low mortgage rates, and relatively low inventory on the competing resale market supported growth in this market segment in 2014.

Completions of single-detached homes increased ten per cent year-over-year in December 2014 to 551 units. Absorptions followed suit, rising 6.7 per cent to 559 up from 524 in the same month of 2013. This led to a decline in the number of complete and unabsorbed homes in inventory both on a month-to-month and year-over-year basis. There were 522 new single-detached homes in inventory in December, down from 532 in November and from 619 in December 2013. The decline was attributable

Figure 2

Source: CMHC

to both lower show homes and spec homes.

The average absorbed price was \$585,261 in December, a nine per cent increase from the same month of 2013. The increase was due, in part, to a higher proportion of more expensive homes being sold. Homes priced above \$650,000 accounted for 19 per cent of absorptions in December, up from 15 per cent one year prior. The shift to more expensive homes also contributed to the increase in the annual average absorbed price. Overall, absorbed prices averaged \$568,676 in 2014, up seven per cent from 2013.

Multi-family starts, which consist of semi-detached, row, and apartment units, declined 33 per cent year-over-year to 558 units in December. The reduction was due to lower row and apartment starts, while semi-detached starts posted an increase. On an annual basis, multi-family housing starts totalled 7,040 in 2014, down from a near-record level of 8,719 units in 2013. Lower apartment starts, which declined 39 per cent, accounted

for the majority of this reduction. A relatively high number of units under construction in the multi-family segment, particularly apartments, led builders to reduce production in this sector in 2014.

There were 10,034 multi-family units under construction in the Edmonton CMA in December, two per cent higher than one year prior and above the preceding five-year average of 7,097. Fewer apartment completions led to an overall decline in the number of multi-family completions in December. A total of 650 multi-family units were completed, down from 802 in the same month one year prior. Absorptions of multi-family units in the ownership market were relatively flat from one year prior at 524 units in December, compared to 525 in the same month of 2013. The number of multi-family units in inventory was down 33 per cent year-over-year to close the year at 474 units. However, inventory is expected to slowly increase next year as the relatively high number of units under construction move into completion.

Existing Home Market

Residential MLS® sales in Edmonton declined four per cent year-over-year in the fourth quarter of 2014. Sales totalled 3,752 from October to December, down from 3,889 in the same three months of 2013. On an annual basis, sales increased two per cent in 2014 to reach 19,857 sales. Demand in this market was supported by employment gains, low mortgage rates and elevated migration.

Price growth continued in the fourth quarter of 2014 as the average residential price rose 7.9 per cent year-over-year to \$364,926. Growth was partly attributable to an increase in the number of higher end homes sold, particularly in November, when 39 home sales priced above the \$700,000 mark were recorded, up from 26 in the same month of 2013. Overall in 2014, the average residential price was \$362,657, up 5.1 per cent from 2013.

Price growth in the Edmonton CMA led to an uptick in the number of households listing their home. The

Figure 3

Source: CREA, Trended by CMHC

number of MLS® new listings increased to 4,976 in the fourth quarter of 2014 from 4,605 in the final three months of 2013. This brought the annual total to 31,315, four per cent higher than 2013. Lower sales and higher new listings brought the sales-to-new listings ratio down to 75 per cent in the fourth quarter from 84 per cent in the same quarter of 2013.

Although new listings increased, active listings on the resale market remained low. Active listings averaged 3,813 from October to December, four per cent lower than the number of listings in the same quarter of 2013. Less selection in the resale market led to a decline in the average number of days on market from an average of 59 in the fourth quarter of 2013 to 53 in the same quarter of 2014.

Economy at a Glance

Employment growth in the Edmonton CMA continued in the fourth quarter of 2014. Employment grew 2.5 per cent year-over-year in the final three months of 2014, up slightly from two per cent in the third quarter. The majority of the job gains were concentrated in part-time positions, which were up 13 per cent, while the number of people working full-time increased 0.5 per cent. Strong employment growth earlier in 2014 led to an annual employment growth rate of 3.5 per cent in 2014. Similar to the fourth quarter, part-time employment growth outpaced full-time growth, with the economy adding 15,100 part-time positions in 2014.

The unemployment rate averaged 4.5 per cent in the fourth quarter of 2014, down from five per cent in the same quarter of 2013, and reached its lowest level since early 2013. Employment gains, coupled with a slower pace of expansion of the labour force, led to the reduction. On an annual basis, the unemployment rate averaged 5.2 per cent in 2014, up from 4.8 per cent in 2013.

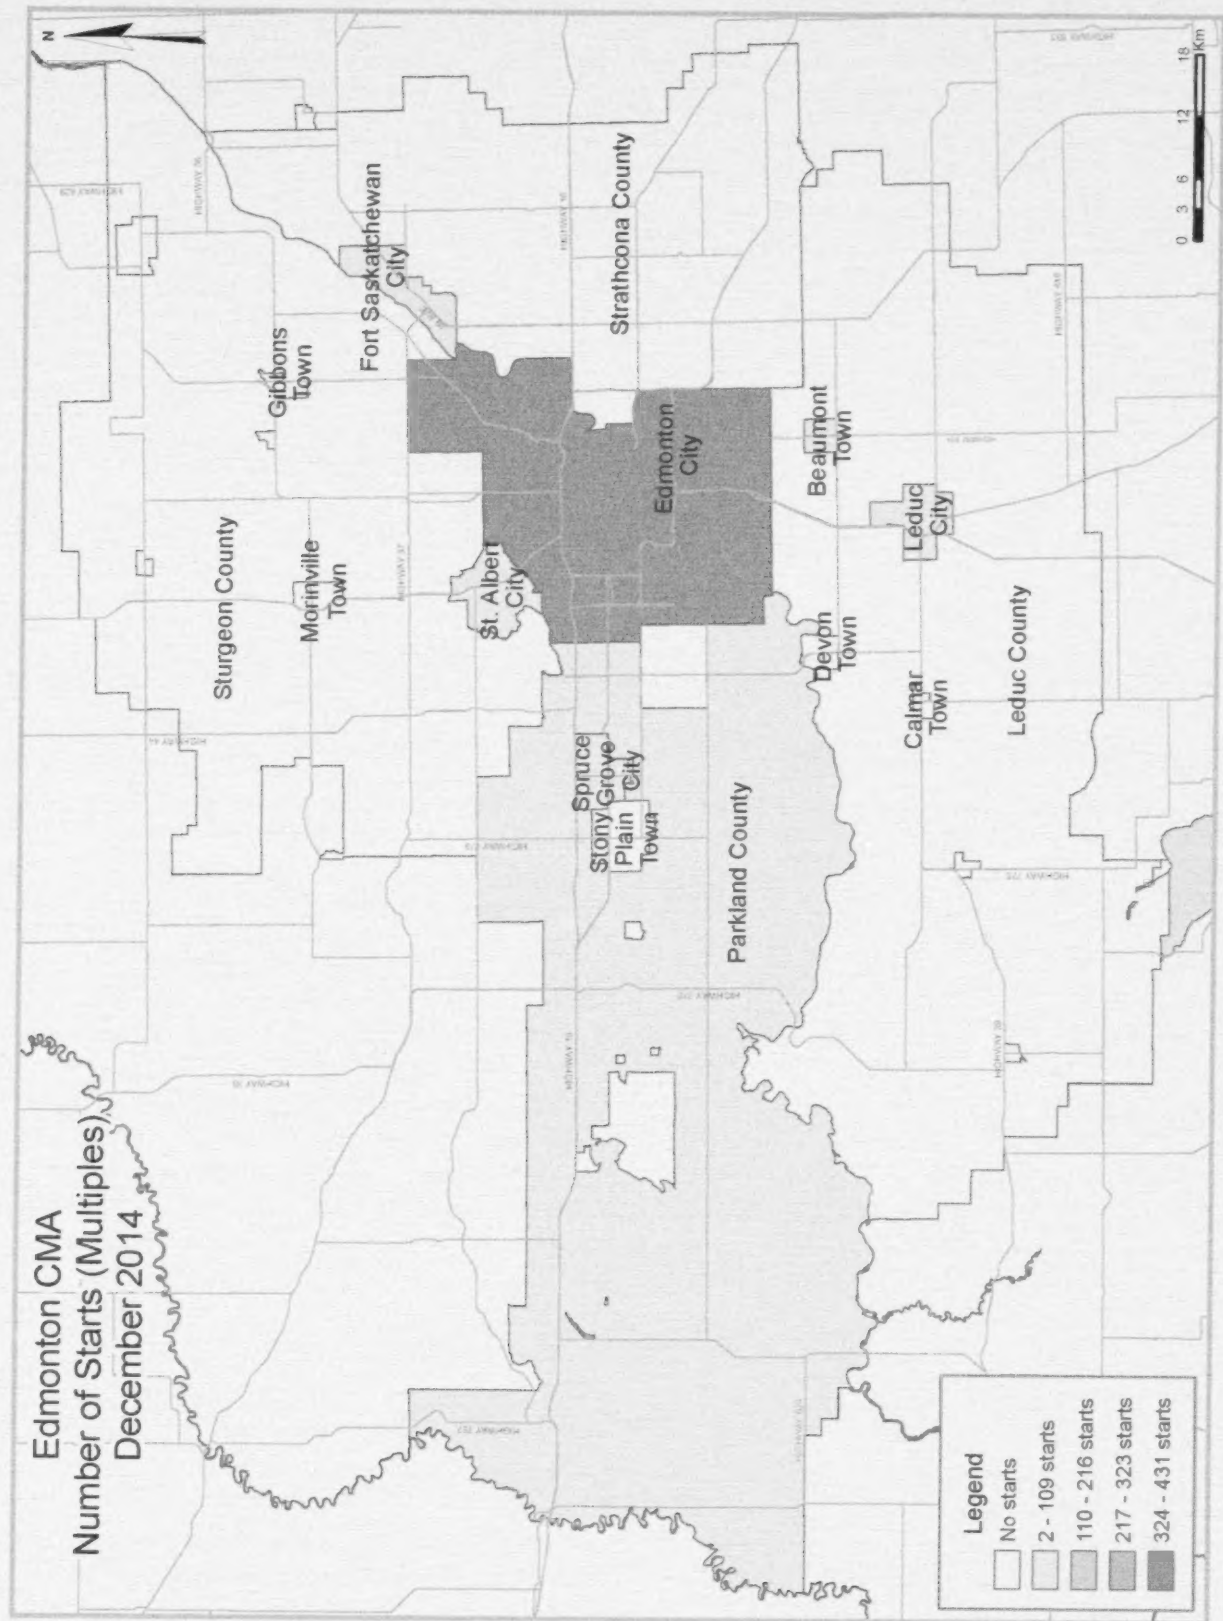

For the first time since late 2011, growth in average weekly earnings stalled in the fourth of quarter of 2014. Weekly earnings averaged \$1,050 from October to December, down slightly from \$1,052 in the same period of 2013. A shift to more part-time positions contributed to the decline.

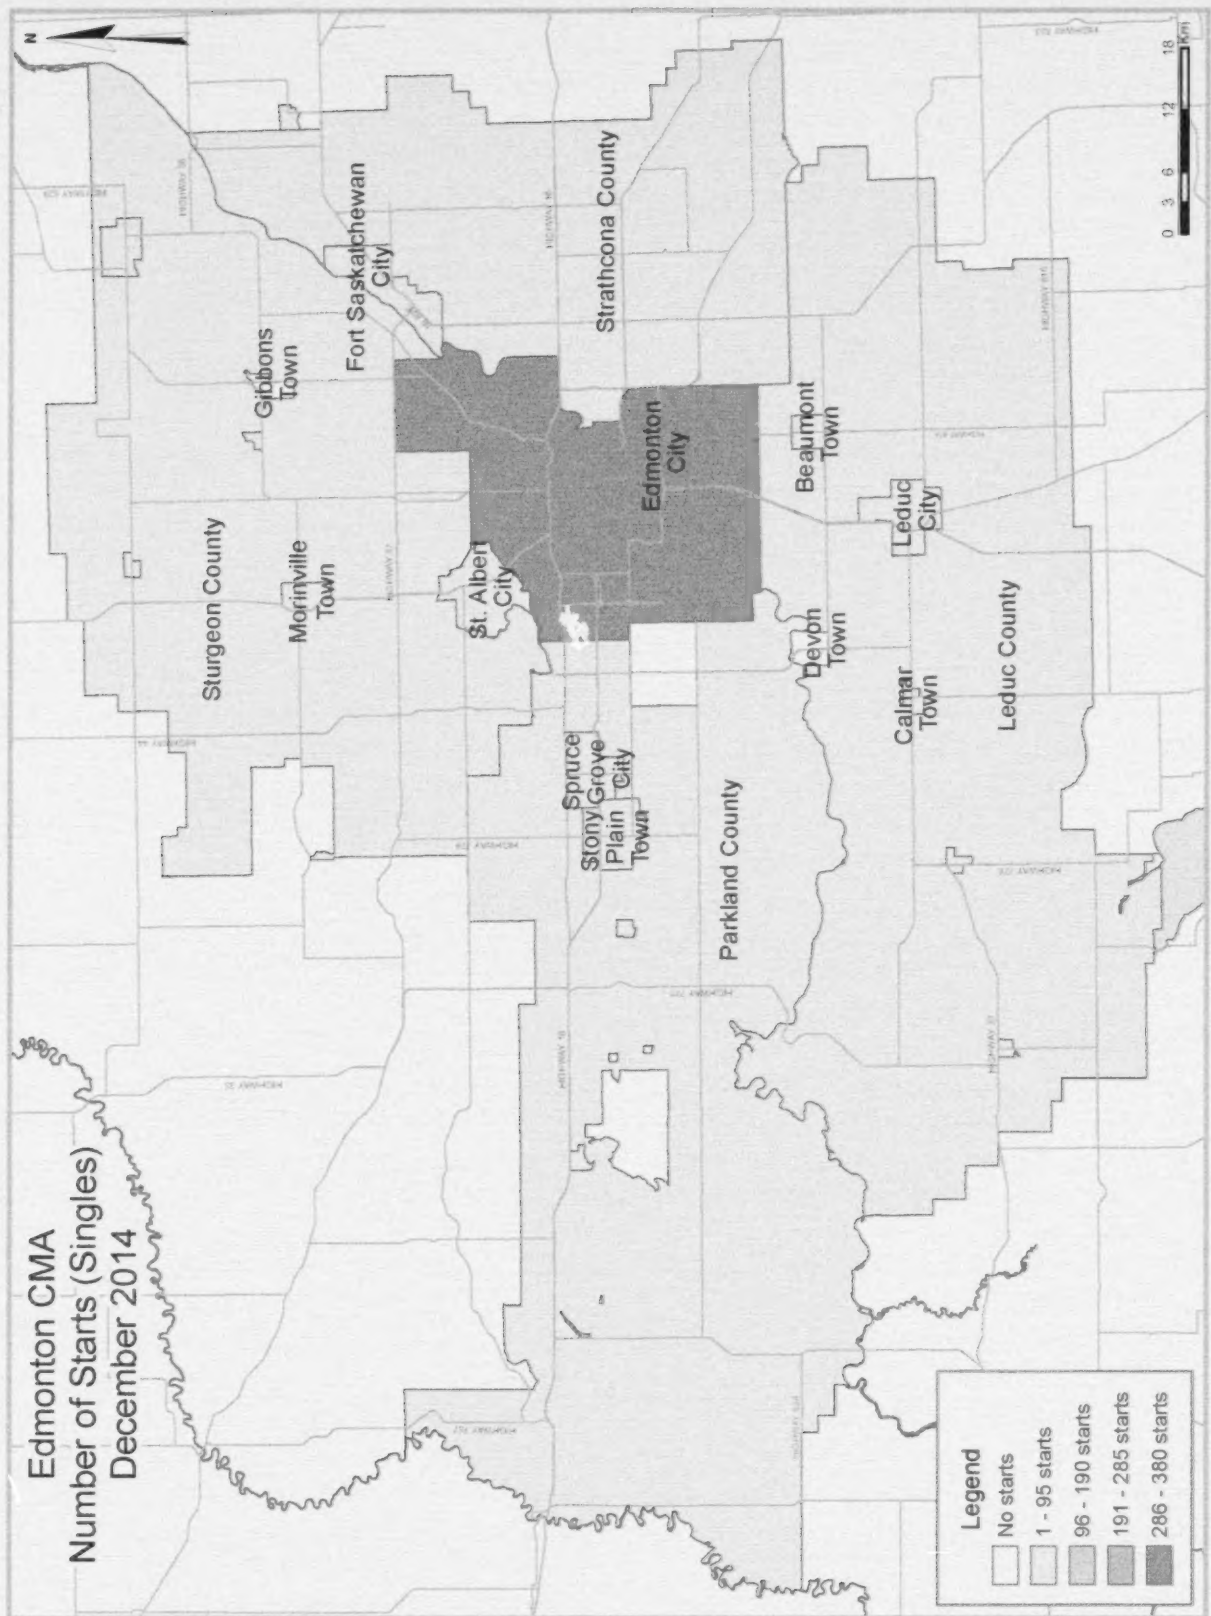

Net migration to Alberta moved lower in the third quarter of 2014, which represents the fourth consecutive quarter recording a year-over-year reduction. From July to September 2014, there were 15,171 net additions, down 34 per cent from the third quarter of 2013. While net international migration was higher year-over-year, the gain was more than offset by declines in both net interprovincial and non-permanent migration. The reduction was most pronounced in non-permanent migration with 431 net additions compared to 5,487 in the third quarter of 2013.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "**dwelling unit**", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
